Statuses, WIP & ownership

v1.3.2-docs.1
target template v1.3.2

One page for the five statuses, the one-task WIP rule, and who owns what. Full detail: HOW TO USE §2, §5.2, §17.

STATUSES

STATUS	MEANING	SET WHEN
Todo	Ready, not started	DoR incomplete or work not picked
In Progress	Owner is working	DoR passes; check-in posted
In Review	Ready for review	PR + evidence attached
Blocked	Cannot proceed	Concrete reason + dependency linked
Done	Accepted and evidenced	Check-out posted; issue closed

ALLOWED TRANSITIONS

FROM → TO	ENTRY CONDITION	EVIDENCE
Todo → In Progress	DoR passes, owner + branch	Check-in comment
In Progress → In Review	Implementation ready	PR/evidence
In Review → In Progress	Changes requested	Review comment
In Progress → Blocked	Concrete blocker	Blocker comment + blocked-by
Blocked → In Progress	Blocker cleared	Unblock note
In Review → Done	Accepted + evidenced	Check-out comment
Done → Todo/In Progress	Regression or follow-up	Comment + plan-change if scope

WIP = 1

- One **In Progress** task per owner (human or agent identity).
- A second In Progress task is a violation unless a dated `plan-change` documents the exception and timebox.
- Finish, block, or defer before starting another task; audit flags WIP violations.

OWNERSHIP

ROLE	RESPONSIBLE FOR	NOT RESPONSIBLE FOR
Owner	Check-in/out, status, evidence	Silent scope growth
Executor (human/agent)	Doing the work under the owner	Self-merging without evidence
Reviewer	Acceptance, evidence, quality	Rewriting history
Maintainer	Triage, sprint/release close, tokens	Bypassing security rules

One owner identity per task. If a human delegates to an agent, record `Owner:` and `Executor:` separately in the check-in.

BLOCKED AND PLAN CHANGES

- **Blocked** needs reason + dependency link + impact + unblock condition; post the blocker template.
- **Plan change:** dated `plan-change` comment (old → new, why) + label + sprint/release/Project field updates + defer equivalent scope. Never rewrite history.

STATUS IS AUTHORITATIVE

The Project **Status** field drives the board; comments and labels are context, not state. Do not use `status:blocked` as a status. Keep one source of truth.
